Children's Carbon Footprint Pledges

Hinterland Project to encourage looking after our local environment and canal - interlinked through art

Hinterland Art Project

You have partnered with local artists on a project to explore the local canal in the Valley throughout the project is enabling the children to interact with nature, our local environment and identify ideas on how to improve and benefit from visiting the local canal area.

Following a virtual Google Meet session with the artists, here are some examples of the artwork so far.

River Waves

How would you draw the water waves? What colours would you choose and why?

Let's have a look around the canal.

Learning about Hinduism and making Diwali Cards

Learning about Hinduism and making Diwali Cards with Rangoli Designs

Happy

Diwali

Hinduism

"In PE, we have been learning all about Hinduism. We read the story of Rama and Sita. We worked in groups to sequence the story. It was so much fun!"

We have decorated some rangoli patterns. For Diwali they represent strength, generosity, and it is thought to bring good luck. Look at all the colours!

Mandir is a Hindu temple.

The Vedas is the Holy Book of Hinduism.

We worked in our table groups to describe the characters of the Rama and Sita story.

Diwali celebrates the story of the return of Rama and Sita to Rama's Kingdom after 14 years of exile.

Diwali

Diwali is a Hindu festival with lights, held in the period October to November.

The festival usually honours Lakshmi, the goddess of wealth.

Happy Diwali!

Happy Diwali!

Here are some of our Diwali cards we decorated. Some of them will be sent to our partner school in Nepal.

Looking after the Environment Posters

Persuasive Adverts for Looking after the Environment, Year 3 children (online learning)

Global warming

Do you like to see the streets covered in rubbish or do you want to see the streets clean or tidy ? Do want to see rats and mice or over rodents scuttling on or along the street ribling rubbish ! And do you want to see the Earth covered in rubbish mountains everywhere you go ? Then you need to join the local council !

Did you know that 100,000,000 marine animals die each year because of rubbish and plastic ! You also should know that turtles think when plastic bags fall into the water they look like jellyfish so they eat it ! And you should definitely know if small fish eat plastic the bigger fish get sick and so one !

So do not just stand there and read this advert join the local council immediately !

Don't Litter in Our Local Environment

Are you sick of seeing trash everywhere you walk?

Do you wish to live around a clean Environment?

Do you dream about living in a clean world?

WE CAN MAKE THAT HAPPEN!

You can encourage others to look after the environment and to keep it clean.

But remember the 3 Rs!

Reuse

Reduce

Recycle

Did you know just by doing those things you can turn this

into this!

Explanation why is it important to save water, Year 3 (during online learning)

Why saving water is important

Did you know that only 1% of the world's water is fresh and accessible? Yeah only 1% did you know you can save water for example if you do the dishes first put the soap and scrub and then use the water don't use it while scrubbing because it will waste more water and if you do what I've told you to do I will save a little more water. Next if you still remember that last week we learned about recycling this my question: do you still recycle?

Well done you still recycle then why don't help me out I don't know the recycling symbol is it these    

let me know.

Well, if we save water then there will be enough for our whole entire world.

The point is save water, don't bathe, take shower instead to save water.

Did you know that water is composed with hydrogen and oxygen very cool well just save water.

Explanation why is it important to save water, Year 3 (during online learning)

Why saving water is important

Did you know that there is more water than land on Earth!? Well, there is for a fact.

But here on earth, the very world you live in, has a big problem. People (unlike you and me) are wasting water which is bothering our planet. You see, we need water to survive to stay clean and so much more! It is devastating to see such good water go to waste, it just breaks my heart to hear that.

But even worse there is only 1% of the world's water that is fresh water but we can stop this by preventing people from wasting it like you could start a club to save water and look up on the internet for ways to save water and maybe protest in the the local streets of London or places where you will find a crowd.

But did you also know that water is the most valuable thing for survival on this planet.

(You can't say the valuable thing in the universe because there is only one thing more important than water)

That is how special it is and if there was no water in the world we would all die because like I said it is one of the things we need for survival. In the world there are only two yes I said two things we need to survive and without these things there won't be another living on earth which is a very bad thing and there will be lots of extinctions, so I need your help to encourage and persuade others into stop wasting water please please help me with all my heart.... STOP WASTING WATER!!!

Explanation why is it important to recycle, Year 3 children (during online learning)

Why recycling is important

Did you know that the average person throws away over 1 TONNE of waste every year and, with all the people in the UK, 13 BILLION plastic bottles are thrown away each year and that in the whole of the UK, 31 BILLION tonnes of waste are thrown away each year?! However, recycling just one plastic bottle can power a light bulb for up to four hours and that recycling just one tonne of paper can save about seventeen trees and around 3 THOUSAND gallons of water! Therefore, recycling is an essential for the existence of the Earth.

Recycling can cause a huge impact to your local area and environment, as your rubbish often ends up in landfill sites, which take up lots of space and plant life is often killed or removed to make more space. When rubbish ends up in landfill, it often decomposes into the ground which creates toxic gases which pollute the air, kill greenery and steal nutrients from the soil, leaving hardly anything for plants that have just started growing.

*But **what does** recycling do exactly? And **how** can we do it? Remember how I said 1 tonne of waste is thrown away by the average person every year? Well, most (about 45%) household waste is actually recyclable. Since a lot of the things that we throw are recyclable materials, such as plastic, paper metal, and even glass. But how do they do it? Let's find out!*

Paper is taken from the special recycling bin that is labelled paper, and is then sent to a factory. Next, it is washed in soapy water to clear any ink off. It is then rolled out very thinly and left to dry. Then, it is combined with water to create a pulp. Plastic has two ways to be recycled. 1 (mechanical recycling), is the plastic is washed, then ground up into powders and melted and 2 (chemical recycling), is the plastic is broken into tiny molecules called monomers (a molecule that, when bonded with several identical molecules forms into a polymer). Metal is recycled by sorting them in their certain type, is then smelted and cooled and is then shaped into usable pieces called ingots. This saves hundreds of millions of pounds every year. Glass (yes, glass) is recycled by washing it, crushing it and then melting it before being moulded into products. There is no drop in quality as well. However, it is tricky to recycle glass.

To conclude, recycling has a positive impact on the environment that we live in and prepares the world for future generations.

Explanation why is it important to recycle, Year 3 children (during online learning)

Why recycling is important

Did you know that recycling helps the world be cleaner and reduces the plastic we use? Did you also know that the UK throws away 13 billion tons of rubbish each year and one person throws away up to 1 tonne of waste each year? Recycling is when materials such as metal, paper, glass and plastic are made into new products so less energy and materials are used.

You should also know if you recycle, one tonne of paper you can save 17 trees and 6000 gallons of water. You should also know that if we don't recycle and everyone's rubbish is thrown into the sea it affects marine life. Did you know if you recycle one plastic bottle it can power up a light bulb for up to 4 hours. You should also note that it takes 400 years for a single plastic bottle to biodegrade. You should definitely know the rainforest helps the icebergs not melt so if we litter and the rainforest go so will the icebergs and so many arctic animals will be homeless.

To conclude recycling has a positive effect on the world and air we live in. It also helps us live and breathe so that animals and us can be happy and let offer generations live happily.

In addition recycling 1 tonne paper can save 17 trees, 6000 gallons of water.

We need to save the 🌍 because they give oxygen with trees and we make the home dirty how will you feel if someone made your house dirty bad right so that's how the earth feel it will get a upset tummy. We just need to clean and tidy whenever we see litter pick it up so then our world will have a little clean and tidy spot. We still have time to clean the world go and clean the world it feels fresh when you clean to you will also. Feel awesome 😊.

Why do we recycle?

We recycle to be clean and tidy Did you know that if we recycle and people who work in a factory 🏭 they make new products and then they give it all to the shop keepers and they sell I think.

It will be best to help because people die animals die because of littering please 🛑 stop littering.
